

Narrative

A new partner contacted EmVenio Research for urgent help in conducting a device and usability study within a tight timeline that couldn't be adjusted. Meeting both the deadlines and participant stratification criteria was crucial.

Due to the time constraints, additional IRB submissions for participant recruitment and engagement materials were not feasible to aid in recruitment efforts. Even with this hurdle, the EmVenio team was able to prepare for the study in one week and achieve full enrollment in the week following.

Solution

EmVenio proposed supporting the study in conjunction with our Atlanta, GA site. This location not only offered patient recruitment services but also provided access to EmVenio's patient database, which aided in targeting the specific participant categories. Furthermore, EmVenio provided support for conducting the visits.

Study Approach

EmVenio was able to go from executed contract to study conduct in 12 days. EmVenio's unique model, established community engagement and database provided a solid foundation for success despite not having recruitment materials available. Our all-hands approach allowed for rapid study implementation that included a CTMS-study setup for scheduling, reporting and performance oversight
